#### Specifications

Product Name: uNu DX Protective Battery Case for iPhone 5

Battery Module Type: Lithium-polymer

Battery Module Capacity: 2300mAh

Input: 5V/0.5A

Output: 5V/1A

Compatibility: Apple iPhone 5 Any Model

#### Using the Battery Case

1. To charge the DX Protective Battery Case, use the included micro-USB cable and connect the case to a USB power source (e.g. a computer or USB wall-outlet).
2. After the case is fully charged, connect the iPhone to the battery case by aligning the charging port of the phone with the protruding lightning connector built into the base of the battery case. Then gently slide the iPhone downwards until the iPhone sits firmly on the lightning connector of the case.
3. After the iPhone is firmly attached to the battery case, attach the top protective piece by sliding it down over the top of the phone. (Make sure to gently press down to ensure the top piece is flush against the battery case and the iPhone).
4. The DX case won't start charging the case automatically. User must PRESS and HOLD the "On / Off" button located on the back of the extended battery case for three (3) seconds in order to enable charging. This same procedure can toggle the case on or off.
5. While the DX is charging the iPhone, a bolt (when < less than 100% power) or a plug (at 100% power) icon will be displayed at the top right

corner of the iPhone screen.

6. To check the power remaining inside the case simply PRESS the ON / OFF button once and the LED bar will light up for 3 seconds and show the amount or remaining power contained in the case. The “longer” the LED bar is, the more power is remaining in the case. A full bar would represent a fully-powered case.

**Note 1:** A blue light will flash on the LED display on the back of the DX to indicate that the battery case is correctly charging.

**Note 2:** When the iPhone is secured within the case the sequence of charging via the micro-USB is as follows. The iPhone will charge first, followed by the case.

### Uninstalling the Battery Case

1. Gently slide off the top case against the bottom battery portion
2. Hold the bottom battery portion with one hand and gently pull the iPhone upwards with the other hand, until the phone is completely separated from the case.
3. Assemble the top piece with the bottom portion by sliding it right back. Make sure always keep the top cap with the battery case in order not to lose the small part. (Additional cap can be purchased from unu's website myunu.com)

### Charging your Battery Case

Note: While your iPhone case should come already pre-charged, it is highly recommended that you first fully charge your case before using it for the first time.

The Battery Case can be charged using the included micro-USB cable. Just plug the micro-USB into the case, and the other end of the cable into a computer's USB port or into a USB wall plug and the case will begin to charge. You will know the case is successfully charging if the LED indicator on the back of the battery case is blinking. Once the LED indicator has stopped blinking and remains a solid green color, the battery case is fully charged.

When the iPhone is connected to the battery case the charging sequence is as follows. First, the iPhone will receive power until it is completely charged. Secondly, the battery case will begin to charge.

### “On/Off” Button & Power Indicator Button

PRESS the “On / Off” button once quickly to be shown the amount of available battery power left within the case via the LED power indicator display, located directly next to the “On / Off” button. The color of LED represents the percentage of remaining power in the following way:

- |  |   |
|--|---|
|  100%-60% |  70%-30%       |
|  30%-5%   |  Blinking < 5% |

PRESS and HOLD the On / Off button for three (3) seconds to power on the battery case. If the battery case has energy, the iPhone should indicate that it is being charged by displaying a small charging symbol at the top right corner of the screen.

To turn the case “OFF,” simply PRESS and HOLD the On / Off button for three (3) more seconds. The iPhone will confirm that the extended battery

has stopped charging the phone by displaying a standard battery icon without the charging symbol.

## **Syncing**

The battery case supports sync-through technology. This means that you can sync your iPhone to a computer without having to take the battery case off. Simply, plug the micro-USB cable into the phone and the other end into the computer's USB slot.

## **Maintenance For Your DX**

In order to keep your battery case at peak performance, be sure to follow the steps below:

1. Re-charge the battery case once every three months when it is not in use.
2. Keep your battery case dry and away from corrosive materials at all times.
3. Do not wash your battery case or use harsh chemicals including soap.

## **Warnings**

Read all the instructions before using this product. Failure to read and follow these safety instructions could result in fire, explosion, electrical shock or other hazard, causing serious and/or fatal injury and/or property damage, for which damages you, ("Purchaser") not uNuare liable.

1. Do not modify, disassemble, open, drop, crush, puncture or shred the product.
2. Do not expose the product to rain or water.
3. Keep away from open flame of sunlight to prevent heat build-up.
4. Keep away from high voltage devices.
5. This product is not intended for children and is not a toy. Keep away from children.
6. Ensure that all persons who use this product are familiar with the safety guidelines set forth in this manual.
